Who wants to be an includer?

Heavy FOCIL vs Light FOCIL:

- Heavy FOCIL: Let attesters be includers
- Light FOCIL: Permissionless includers, any wallet with > 0 balance?
  - Maybe even delegated system

How to be an includer?

Includers need some data on state.

- VOPS: Keep EOA-relevant state date (address, nonce, balance)
- More general partial statelessness, keep as much in your includer node as you can/want => be a worse includer, CR degrades accordingly
- Includer-as-relayer, advertise oneself

Thank you!

- Includer role is key to unbundle the full node
- Most questions are about how to get the right transactions to the includer
- imo progressing on our three goals is best way to draw the future of nodes
- scale L1, scale blobs, improve ux ;)
